

COVER_{LETTER.}

I am reaching out to express my interest in joining your team.

My professional journey is defined by a continuous interplay between design thinking, strategic execution, and technical versatility, attributes I have cultivated through diverse roles in architecture, digital modeling, urban documentation, and IT-enabled creative workflows.

With a formal background in architecture and visual arts, my education at the “G.M. Cantacuzino” Faculty of Architecture and National Art High School in Bacău provided a dual foundation in technical precision and artistic sensibility. I’ve since expanded this foundation through professional experience that spans office-based, hybrid, and fully remote environments, developing projects from concept to technical execution.

I bring a clear understanding of complex, multi-phase workflows, from initial feasibility studies and urban analysis, to BIM coordination, graphic modeling, and presentation delivery. Having worked within and across interdisciplinary teams, I’ve contributed to both internal project development and external client interactions. My recent collaborations (as self-employed B2B collaborations, Mobotiq SAS, and others) have emphasized adaptable project delivery, digital systems coordination, and clear client communication.

In parallel, I’ve also completed certifications with Mimo in IT-related disciplines, including web development, programming, and digital logic fundamentals. These complement my design and architectural background with a structured, logical approach to system-based problem-solving and automation.

What sets me apart is a holistic approach to projects, balancing aesthetic coherence with technical rigor, and aligning creative intent with operational goals. I value adaptability, clarity in communication, and long-term thinking in both process and vision.

Thank you for taking the time to review my background. I am open to further discussion and am happy to share additional materials or references if needed.

Warm regards,

Mihael-Ionuț Furdu
